**MESSAGE 1**  
Flash Flood Prediction Program

---

**LOW IMPACT FLOODING**

**PRIORITY DISSEMINATION RECOMMENDED**

We have determined that low impact flooding is likely in Adams County including:

-----  
from: **Current** to **230 PM**.

Prime time for flooding: **Current** to **200 PM**.

-----  
Forecast rainfall: Weak/moderate and briefly thunderstorms will have the potential to produce 0.4-0.9" of rain in 10-30 minutes. Up to 1.4" of heavy rain is possible if multiple thunderstorm cells train over the same location.

-----  
The most likely areas to be impacted by flooding are:

Urban streams/gulches; road crossings; recreational trails; adjacent open space areas/campgrounds/parks; floodplain properties; utilities

Urban streets, intersections, low lying areas, known trouble spots

-----  
Additional Information: **Excessive runoff is imminent or already occurring over portions of Adams County from a N to S oriented line from just E of DIA and just W of Bennett. Strong/severe thunderstorms may produce more hail than rainfall and could also produce accumulating hail that could clog drainages.**

This message is not intended for public dissemination. Please pass this information along to affected emergency response organizations (police, fire, public works, etc.) within your area.

Also, please take appropriate actions to prepare for possible flooding.

Further information will be provided to you as it becomes available.
